"As businesses and governments establish their own new normal, **5G and Edge computing** will be necessary to deliver the automation, performance and cognitive insight required by many industries—including manufacturing, healthcare, energy and utilities, among others. Telecom operators will need to embrace open ecosystems to externalize innovation and accelerate new services."

The Linux Foundation Launches New LF Edge to Establish a Unified Open Source Framework for the Edge

More than 60 global founding members across enterprise, IoT, telecom and cloud collaborate on open source framework for edge computing and future of IoT

SAN FRANCISCO, January 24, 2019 – The Linux Foundation, the nonprofit organization enabling mass innovation through open source, today announced the launch of LF Edge, an umbrella organization to establish an open, interoperable framework for edge computing independent of hardware, silicon, cloud, or operating system. LF Edge is initially comprised of five projects that will support emerging edge applications in the area of non-traditional video and connected things that require lower latency, faster processing and mobility.

LF Edge includes Akaino Edge Stack, EdgeX Foundry, and Open Glossary of Edge Computing, formerly stand-alone projects at The Linux Foundation and new projects EVE (Edge Virtualization Engine), Home Edge.

LF Edge Momentum continues with Project EVE seed code, project demonstrations at IOT World and new members

- IOT OnPrem Edge Virtualization Engine seed code contributed by Zededa to LF Edge
- Four new members join existing community of 70+ LF Edge organizations
- LF Edge on Display at IoT World, with Akaino Edge Stack, EdgeX Foundry and Project EVE demonstrations

SANTA CLARA, Calif. – IoT World – May 14, 2019 – LF Edge, an umbrella organization within the Linux Foundation that aims to establish an open, interoperable framework for edge computing independent of hardware, silicon, cloud, or operating system, today announced continued project momentum. Project Edge Virtualization Engine (EVE) receives initial seed code from LF Edge founding member ZEDEDA, as the community showcases a range of edge/IoT application demonstrations, from connected cars to wind turbines, on-site at IoT World.

Akkaino Edge Stack Issues Premier Release, Sets Framework to Enable 5G, IoT Edge Application Ecosystem

- Inaugural release unifies multiple sectors of the edge across disciplines, including IoT, Enterprise, Telecom, and Cloud
- Delivers tested and validated deployment-ready blueprints
- Creates framework for defining and standardizing APUs across stacks, via upstream/downstream collaboration

SAN FRANCISCO – June 6, 2019 – LF Edge, an umbrella organization within the Linux Foundation that aims to establish an open, interoperable framework for edge computing independent of hardware, silicon, cloud, or operating system, today announced the availability of Akaino Edge Stack Release 1 (“Akaino R1”). Created via broad community collaboration, Akaino’s premiere release unlocks the power of intelligent edge with deployable, self-certified blueprints for a diverse set of edge use cases.

EdgeX Foundry Announces Production Ready Release Providing Open Platform for IoT Edge Computing to a Growing Global Ecosystem

- Enables IoT digital transformation for Enterprise, Industrial, Retail and Consumer
- Supports complementary products and services from global open ecosystem including commercial support, training and customer pilot programs
- Deployed in many end user projects; EdgeX also collaborates with IIC on AI testbeds and is the foundation for the Open Retail Initiative (ORI)

SAN FRANCISCO – July 11, 2019 – EdgeX Foundry, a project under the LF Edge umbrella organization within the Linux Foundation that aims to establish an open, interoperable framework for edge IoT computing independent of hardware, silicon, application cloud, or operating system, today announced the availability of its “Edinburgh” release.
LF Edge New Announcements

LF Edge Expands Ecosystem with Open Horizon, adds seven New Members and reaches critical deployment milestones

SAN FRANCISCO, CA – April 30, 2020 – LF Edge, an umbrella organization under The Linux Foundation that aims to establish an open, interoperable framework for edge computing independent of hardware, silicon, cloud, or operating system, today announced continued project momentum with the addition a new project and several technical milestones.

Welcome new members CloudBrink, Federated Wireless, Kaloom, Ori Industries, Tensor Networks, YoerEIR and ITRI
The Third Act of the Internet

- Over $700 billion in cumulative CAPEX will be spent within the next decade on edge IT
- The edge is the "Third Act of the Internet" building up previous phases or regionalization and origination.
- The edge today is both a solution-specific story and an infrastructure-buildout story
- Edge computing is a global phenomenon
- The deployed global power footprint of the edge IT and data center facilities will reach 102 thousand MW by 2028
- A common definition of the edge is gaining momentum

THE LINUX FOUNDATION
LF EDGE
LF Edge: Key Takeaways

1. Harmonizing Open Source Edge Communities across IOT, Enterprise, Cloud & Telecom

2. Keeping LF Edge Open & Interoperable with
   › Hardware, Silicon, Cloud, OS, Protocol independence
   › Bringing the best of telecom, cloud and enterprise – location, latency & mobility
   › In collaboration with Consortiums/SDO (IIC, AECC, OEC, ETSI)

3. Hosted by the Linux Foundation similar to other Open Source Communities like CNCF (Kubernetes), LF Networking (ONAP) and many more.
Get Involved in the LF Edge Technical Communities

› Participation in LF Edge Projects is open to all

› Getting involved in the technical communities is the best way to learn
  
  › Step 1: Get a Linux Foundation ID Here:
    [https://identity.linuxfoundation.org/](https://identity.linuxfoundation.org/)

  › Step 3: Join workflows for the projects and working groups, subscribe to mailing lists, ask questions, contribute!

Way to participate:

- Attend project meetings
- Attend developer events
- Join approved projects
- Propose a project
- Write documentation
- Contribute use cases
- Analyze requirements
- Define tests / processes
- Review and submit code patches
- Build upstream relationships
- Contribute upstream code
- Provide feedback through VSFG
- Host and staff a community lab
- Answer questions
- Give a talk / training
- Create a demo
- Evangelize LFE and its projects
What is the new way of supporting our community?

**The Linux Foundation initiatives**

- ONES NA in Fall (Sept 28-29)
- Training - Free Training and discounted courses
- (New) projects in Multiple areas to help move OSS forward

**LF EDGE**

- Project-specific Webinar Series
  - Two webinars (200+ participation)
- EdgeX Virtual Hackathon (138 registrants)
- Edge training

[https://www.lfedge.org/2020/04/16/how-open-source-is-driving-5g-edge-ai-and-iot/](https://www.lfedge.org/2020/04/16/how-open-source-is-driving-5g-edge-ai-and-iot/)
LF Edge Membership
LF Edge Governance

Board Committees (As Needed)
- Audit & Finance
- End User Advisory Group
- Compliance & Verification

LF Edge Governing Board
- Strategy & Priorities
- Budget
- Marketing Strategy & Events
- Legal & overall governance

Technical Advisory Council (TAC)
- External Focus (SDO/OSS)
  - Vertical Solutions focus (e.g., O&G, Retail, Industrial/Manuf, Home, Telecom, etc)
- Cross-project collaboration
- New Project Induction
- Developer Voice to GB

Developer Communities
- Akaiino TSC
- EdgeX TSC
- Home Edge TSC
- Project EVE TSC
- Fledge TSC

Outreach Committee
- WG project x
- WG project y

Annual Marketing Plan
- PR
- Events
- Content/Web
- Branding
- Market Development

The Linux Foundation Internal Use Only
LF Edge Membership Structure, broad base – lower dues

Summary
1. Premier Member, Annual cost for LF Edge $50,000 (similar to Akraino)
2. Simplified EdgeX general category to match LF levels
3. Dues for existing projects will be credited towards LF Edge or any LF projects.

<table>
<thead>

</tbody>
</table>

LF Edge membership also requires companies to corporate members of The Linux Foundation (similar to Akraino and EdgeX Foundry). A discount of $5,000 to $20,000 is available for existing Linux Foundation members who join LF Edge.
LF Edge Membership – the benefits

Premier

Influence Strategic Direction of LF Edge & its projects (as a Voting GB member)

› Budget Influence/approval, how and where the project spends money.
› Direct Influence on messaging, developer events, training
› Influence the marketing, messaging, and positioning to best represent the project for your uses
› Marketing Committee Voting Seat

Direct Interaction with Leadership – within LF and across peers

› Premium access to the project ED/VP to understand business goals
› Premium access to the Operations staff. IT, Marketing, Operations, Leadership
› Participate in any Cross project strategy discussions on harmonization and future direction of Edge
› LF Leadership support to Keynote member events, participate in outreach (eg roadshows, events, conference meet ups etc.)

Technical and Roadmap Direction Influence (through the technical community)

› TAC (Technical Advisory Council) voting seat
› Find like-minded companies/developers to build a coalition to get an idea accepted and prioritized by the community
› Aid the developers in actions they can take to improve their standing, position, and influence in the community., etc.

Brand Momentum – ability to show Leadership in Open Source which drives end user adoption and talent.

› Open Source Brand Affinity, prove to your customers that you are a leader in the project, hire talented software engineers

General

Learning and Engaging to create the largest Open Source Edge shared technology roadmap

› Work together across company lines and industries
› Participate in elected board seat process

Marketing & Thought Leadership

› Logo on the website once your membership has been announced. LF will support with quotes on Press releases related to the project
› Marketing Committee comprised of a representative from each Member company. General Members may appoint a representative as an observer of the Marketing Committee meetings on a non-voting basis. The objective of this Committee is shaping the marketing direction for edge. The Linux Foundation will do the heavy lifting, so this is more to oversee and shape the discussion/direction with the other Members for the Marketing efforts. This person can also funnel all Marketing information back to your organization so that the key stakeholders are in the loop.
› Participate in our hosted projects and attend our events, meetups, and roadshows

Technical Steering Committee & Technical Community

› TSC meetings are open to the public and we encourage all members of the technical community to participate in the discussion moving forward.

LF Edge, bringing Edge initiatives together

IOT+Telecom+Cloud+Enterprise
LF Edge Projects
Unified Edge Interoperability - key architectural tenets

1. Abstract data, apps and domain knowledge from underlying infrastructure
   - Invest in data ingestion, security, and M&O tools that are consistent regardless of use case

2. Untether data from cloud services as close as possible to the edge source
   - An open edge supports all future permutations of edge to cloud data flow without risk of lock-in

3. Extend cloud-native principles wherever possible
   - Plan for CI/CD, while also recognizing technical tradeoffs (e.g. constrained hardware, time critical applications) and need for OT/IT cultural evolution
LF Edge – umbrella for Edge Projects

Aims to create an open source software stack that supports high-availability cloud services optimized for edge computing systems and applications.

Highly flexible open source software framework that facilitates interoperability between heterogeneous devices and applications at the IoT Edge, along with a consistent foundation for security and manageability regardless of use case.
LF Edge – New umbrella for Edge Projects

STAGE 2: GROWTH PROJECTS

**EVE**

An open abstraction engine that simplifies the development, orchestration and security of cloud-native applications on distributed edge hardware. Supporting containers, VMs and unikernels, EVE provides a flexible foundation for Industrial and Enterprise IoT edge deployments with choice of hardware, applications and clouds.

**Fledge**

Fledge is an open source framework and community for the Industrial Edge. Architected for rapid integration of any IIoT device, sensor or machine all using a common set of application, management and security REST APIs with existing industrial "brown field" systems and clouds.

**HOME EDGE**

Interoperable, flexible, and scalable edge computing services platform with a set of APIs that can also run with libraries and runtimes.

**State of the Edge**

State of the Edge is an open source research and publishing project with an explicit goal of producing original research on edge computing, without vendor bias. The State of the Edge seeks to accelerate the edge computing industry by developing free, shareable research that can be used by all.
STAGE 1: AT LARGE PROJECTS

Baetyl offers a general-purpose platform for edge computing that manipulates different types of hardware facilities and device capabilities into a standardized container runtime environment and API, enabling efficient management of application, service, and data flow through a remote console both on cloud and on prem.

Open Horizon is a platform for managing the service software lifecycle of containerized workloads and related machine learning assets. It enables management of applications deployed to distributed webscale fleets of edge computing nodes and devices without requiring on-premise administrators.

Secure Device Onboard (SDO) is an automated “Zero-Touch” onboarding service.
Stage 3: Impact Projects
Aims to create an open source software stack that supports high-availability cloud services optimized for edge computing systems and applications.

Top LF Edge Blueprints

- Network Cloud & Radio Edge
- 5G & MEC
- Connected Vehicle
- AI/ML and AR/VR Applications at the Edge
- Automated Factory

Technical Summary

- Finite set of configurations to reduce complexity
- Cloud Native/Edge Native- optimized for the Edge in all of its forms
- Autonomous, turn-key solutions for service enablement to enable rapid introduction
- Low latency placement and processing to support edge drivers
- Zero-touch provisioning, operations, and lifecycle (reduce on OpEx)

Project Release Status (as of Q1 2020)

- Current Release R3, 20 Blueprints
- Next release (Nov 2020)
Project Summary: EdgeX Foundry

Stage 3-Impact, founding project

A highly flexible IOT open source software framework that facilitates integration and interoperability between heterogeneous devices and applications.

Top Use Cases

EdgeX provides a common set of horizontal capabilities to support use cases across any IOT vertical. Examples:

- **Manufacturing** Remote monitoring of production equipment, get data from multiple sources and filter/transform it to react at edge before sending to the cloud for aggregation, analysis and to optimize production and maintenance.
- **Retail** - the Open Retail Initiative (ORI) promotes the EdgeX framework in retail to ingest data from cameras (OpenVino), POS systems, RFID, etc and use it at the edge for use cases like Loss Prevention and Inventory Management.
- **Building Automation** - Edge Control (control devices via a common API), use edge data to control building environment (HVAC, lighting, access). Connect to the cloud to optimize power consumption using ML.

Technical Summary

- Agnostic to: HW, OS, OT protocols, sensors and Cloud & Enterprise endpoint
- Distributable set of microservices for scalability and fault tolerance
- Enables autonomous operations and intelligence moving to the edge to address low latency decision making/actuation, bandwidth & storage, and remote ops

Project Release Status (as of Q2 2020)

- 4 Million downloads! Growing at 1 million a month!
- Geneva (1.2) commercial deployment release
- Next release Hanoi (1.3)- Oct 2020- Improved Security, better performance statistics, dynamic device provisioning/on boarding ...
Stage 2: Growth Projects
Project Summary: EVE
Stage 2 - Growth, founding project

An open edge computing engine that simplifies the development, orchestration and security of cloud-native applications on distributed edge hardware. Supporting containers, VMs and unikernels, EVE provides a flexible foundation for Industrial and Enterprise IoT edge deployments with choice of hardware, applications and clouds.

Top Use Cases

› Consolidating a mix of container and VM-based workloads (e.g. for legacy apps) on the same IoT edge hardware
› Deploying edge hardware to serve as secure network proxy for downstream IoT nodes and systems
› Deploying out-of-band security and analytics apps leveraging a network SPAN port

Technical Summary

› Fully-featured bare metal orchestration foundation
› Targeted at the IoT edge: x86/Arm nodes with 1GB+ memory up to small clusters
› Supports VM, OCI/Docker and Unikernel app deployment models
› Supports zero trust security with all key functions built on HW root of trust
› Enables zero touch onboarding with no device username/password required
› Supports rollback/forward updates
› Enables IO port disablement, CPU/GPU assignment to apps, distributed firewall
› Open orchestration API for use with console of choice

Project Roadmap (as of Q1 2020)

› Increase modularity to support more deployment options
› Add support for Kubernetes via K3S and clustering
› Add mesh networking capabilities
› Continue to shrink the footprint of EVE in order to run on smaller and resource-constrained embedded edge devices

https://www.lfedge.org/projects/eve/
**Project Summary: Fledge**

**Stage 2- Growth**

Fledge is an open source framework and community for the Industrial Edge. Architectured for rapid integration of any IIoT device, sensor or machine all using a common set of application, management and security REST APIs with existing industrial "brown field" systems and clouds.

**Top Use Cases**

› Eliminate route based monitoring and deploy modern condition based monitoring, predictive maintenance and situation awareness in industrial plants, mines and factories.
› Integrate IIoT with existing OT systems (no data silos)
› Edge based anomaly detection, machine learning and AI to determine machine state and/or part quality.

**Technical Summary**

› Pluggable microservices based architecture to rapidly connect any new or legacy machine, sensor or PLC using Python or C.
› Easily build REST based applications and services that aggregate, buffer, transform, analyze and deliver machine data from sensors to any/all OT systems and clouds.
› Consistent IIoT management and security APIs to scale up and out

---

**Project Release Status (as of Q1 2020)**

› Deployed in manufacturing, energy, water/waste water, and oil and gas operations since Q1 2019.
› Release 1.8 March 30, 2020
  › ML/AI Tensorflow Support
  › Google Cloud North
  › Vibration Data Management 8000khz
  › New mgt/security API

[https://wiki.lfedge.org/display/FLEDGE/Fledge+Home](https://wiki.lfedge.org/display/FLEDGE/Fledge+Home)
Concentrates on driving and enabling a robust, reliable and intelligent home edge computing open source framework and ecosystem running on a variety of devices at home. To accelerate the deployment of the edge computing services ecosystem successfully, the Home Edge Project provides users with an interoperable, flexible, and scalable edge computing services platform with a set of APIs that can also run with libraries and runtimes.

**Top Use Cases**

- Service offloading in a home environment when device doesn’t have required capabilities
- Distributed computing framework to maintain low latency and high data privacy

**Technical Summary**

- Device/Service Management: Device/Services which are in home network are discovered and managed based on their service capabilities.
- Service Offloading: Low end devices request high end devices to perform computing on behalf of them using the scoring manager.
- Scoring Manager: Helps to pick a right device to perform service

**Project Release Status (as of Q12020)**

- Baobab (Oct 2019) with Device/service discovery, Service offloading was released
- Coconut (Oct 2020) is planned with VPN, Data Storage modules

[https://wiki.lfedge.org/display/HOME/Home+Edge+Project](https://wiki.lfedge.org/display/HOME/Home+Edge+Project)
Project Summary: State of the Edge
Stage 2 - Growth

State of the Edge is an open source research and publishing project with an explicit goal of producing original research on edge computing, without vendor bias. The State of the Edge seeks to accelerate the edge computing industry by developing free, shareable research that can be used by all. The SotE Project contains LF Edge’s Glossary and Landscape projects.

Principles

› The edge is a location, not a thing;
› There are lots of edges, but the edge we care about today is the edge of the last mile network;
› This edge has two sides: an infrastructure edge and a device edge;
› Compute will exist on both sides, working in coordination with the centralized cloud

Project Release Status (as of Q2020)

› Moved under LF Edge April 2020

https://www.lfedge.org/projects/stateoftheedge/
Stage 1: At Large Projects
Baetyl offers a general-purpose platform for edge computing that manipulates different types of hardware facilities and device capabilities into a standardized container runtime environment and API, enabling efficient management of application, service, and data flow through a remote console both on cloud and on prem.

**Top Use Cases**

- Light, secure, and scalable edge applications
- On drone processing
- AI/ML - Allows for processing at the edge, reducing latency
- Quality Inspection by AI via video images
- Automated/Zero touch onboarding - remote management

**Technical Summary**

- Works with x86, arm, MIPS and OS agnostic
- Services to speed development
  - Video Ingress Service, ML Inference as a Service
  - For unstable Networks - has local persistence

**Project Release Status (as of Q1 2020)**

- Baetyl as a Container - Mid 2020
- Remote Management - APIserver: Certification, application config & OTA Mid 2020

A Deeper look at key highlights, project Open Horizon

Open Horizon is an application and metadata delivery and management platform.

- policy-based mechanism to securely and autonomously deliver containerized workloads to diverse edge compute nodes
- It allows workload and ML model management across fleets at hyperscale, from a single device to deployments of 10,000 nodes or greater, without requiring on-premise administration.

LF Edge Expands Ecosystem with Open Horizon, adds seven New Members and reaches critical deployment milestones

SAN FRANCISCO, CA – April 30, 2020 – LF Edge, an umbrella organization under The Linux Foundation that aims to establish an open, interoperable framework for edge computing independent of hardware, silicon, cloud, or operating system, today announced continued project momentum with the addition a new project and several technical milestones.

Seed contribution: IBM

Collaboration with
- EdgeX Foundry
- Glossary
- Home Edge
Project Summary: Open Horizon
Stage 1 - At Large

Open Horizon is a platform for managing the service software lifecycle of containerized workloads and related machine learning assets. It enables management of applications deployed to distributed hyperscale fleets of edge computing nodes and devices without requiring on-premise administrators.

Top Use Cases

› Management of ML models and containerized workloads on constrained devices

Technical Summary

› Provides a policy-based mechanism to securely deliver containerized workloads to edge compute nodes of varying sizes and capabilities and in various connected states.
› Fully autonomous agent runs on every edge device to enable orchestration and manage the lifecycle of your containers
› Autonomous Agreement Bots (agBots) monitor each edge node
› Model Manager automatically syncs assets bi-directionally based on policy

Project Release Status (as of Q22020)

› Launched Q2 2020 with LF Edge and incubated with LF Edge’s EdgeX
Secure Device Onboard (SDO) is an automated “Zero-Touch” onboarding service.

**Top Use Cases**

› Enables Build-to-Plan Model — ODMs can build identical IOT devices in high volume using a standardized manufacturing process.

› SDO “Late Binding”— allows the device’s target platform to be selected “late” in the supply chain, at first power-on.

› It’s Open – means its service & cloud independent.

**Technical Summary**

› Secure Device Onboard provides easier, faster, less expensive, and secure onboarding of devices. It expands TAM for IOT devices, and in turn accelerates the resulting ecosystem of data processing infrastructure.
